

Two primary steel producers choose Woodings to deliver new hot blast valves.

Woodings Industrial has been awarded with contracts to design and produce a total of four new hot blast valves--two each for two separate US based steel mills.

Each of the 54" valves will be fully water cooled gate designs to minimize heat loss and to maintain the skin temperature of the base materials at an appropriate level.

Woodings previously supplied one of the steel producers with a single hot blast valve a year ago.

The new valves will be completed in the April/May time frame. Woodings/Munroe will be installing and commissioning the equipment.

"Our ability to provide equipment that is on the leading edge of design and performance is what differentiates us and has allowed us to thrive and grow," stated Rob Woodings, President. "We help our customers keep their operations humming and productive."

The Powerhouse in Hot Metals. Woodings Industrial and Munroe Inc. are global leaders in the design and manufacture of equipment and components for the metals industries. Blast furnace, BOF or EAF--wherever hot metal is produced you'll find equipment from Woodings & Munroe operating at the highest level of productivity.
